**Prerequisites**

- VS Code
- node JS
- git bash
- angular cli

Task 1

- Create a basic Angular application using Angular CLI
- Install and configure bootstrap in the Angular app created
- Clear App component (use container style from bootstrap to wrap content inside app component)
- Create a new component manually (use bootstrap jumbotron style)
- Create a new component with cli (use bootstrap card style)
- Use the two components in App component
- Use (or explore) bootstrap styles (button etc.)

Evaluation Criteria

2: Angular default application is up and working

3: Bootstrap is installed and configured to be used with some demonstration

4: Created two components one manually and another using CLI

5: Application looks exactly like in the mockup which is build using recommended bootstrap styles
